(Water, Food, Toxicology, SUMA and HIV Confirmation Department) and in the Pediatric Hospital, in the same Microbiology Laboratory of the Hospital (Clinical Bacteriology, Zoonosis, Parasitology, Malaria, Serology, TB and Quality Control).

Examinations are performed by department in each location:

In the Provincial Center of Hygiene the Chemical and Microbiological analysis of samples of Water and Food coming from state companies and from the private sector is carried out, governed by a system of sanitary vigilance of Pinar del Rio, there is also the department of Hospital Disinfection that carries out the control of the quality of the disinfectant solutions of the hospitals and polyclinics of the province and the department of Occupational Toxicology where the samples of blood and urine of workers exposed occupationally to pesticides and metals, as well as to their work environment are analyzed. In the department of SUMA different diagnoses are made: HIV, surface antigen for Hepatitis B, antibodies for C, PSA of the 4 areas of health and diagnosis of Dengue throughout the province.

In the departments located in the laboratory of Microbiology of the Pediatric Hospital, samples are received for urocultures, coprocultures, bacteriological vaginal exudates, otic, ocular and skin. The quality control of Serology, Malaria, Parasitology, diagnosis of Toxoplasma, Brucellas and Leptospira, of the adult population of the municipality of Pinar del Rio, Viñales, Minas, San Juan, San Luis and La Palma is carried out.

In the rest of the municipalities, Microbiology service laboratories are provided such as: Direct Sputum, direct vaginal, serology and fecal feces and in the municipality of Sandino these are provided and samples are taken for bacteriological diagnosis of vaginal exudates, otic, skin, ocular and coprocultures.
