The services provided to the population are divided into two groups: Projects and Procedures.

Projects:

Why do I need it?

Every work needs a technical documentation (project) carried out by qualified personnel to obtain the desired results. This documentation is the reflection of your needs taken to execution plans by a professional, who, in addition, contributes his knowledge so that your project is unique and at the same time is integrated adequately to the environment that surrounds it.

The project is essential to obtain the construction license which in turn is necessary for the legalization of all new works or modifications to buildings.
